

JEYAKRISHNAN M

Dindigul, Tamilnadu | jeyakrishnanmarimuthu@gmail.com | +91 9787152349 | LinkedIn : Jeyakrishnan M

Personal Profile

IT graduate with strong skills in programming, databases, and web technologies. Experienced in developing practical solutions through academic projects and internships, with a focus on problem solving and efficient system design.

Quick to adapt to new technologies and comfortable working both independently and in team environments.

Interested in applying technical knowledge to build reliable and scalable software solutions.

Technical Skills

Programming: Python, M-Scripting

Data & Visualization: Power BI, Microsoft Excel

AI & LLM: Prompt Engineering, Large Language Models

Machine Learning: CNN, Deep Learning, Grad-CAM

Tools & Platforms: Flutter, Firebase, Google APIs

Databases: SQL

Education

Kalasalingam Academy of Research and Education, B.Tech Information Technology

- CGPA: 8.18/10.0

Experience

Intern, Trios Technology

- Assisted with basic web development tasks under the guidance of the development team
- Gained exposure to coding practices and project workflows in a professional environment
- Learned to use productivity and collaboration tools for day-to-day tasks

Key Contribution: Form Validation Module

Contributed to the company's *Inventory Management System* project by developing and testing a JavaScript-based form validation module. Ensured accurate user input for product details, reduced data entry errors, and supported smooth integration with the backend API. This task improved usability and reduced manual corrections for staff.

Projects

AI-Driven Glaucoma Detection System

- Designed and developed an AI-based medical image analysis system to detect glaucoma from retinal images
- Implemented a CNN model to classify glaucoma severity levels (Normal, Mild, Moderate, Severe)
- Enabled users to upload retinal images or perform real-time scanning using a camera interface
- **Tools Used:** Python, CNN, Grad-CAM, Deep Learning, SQL

Ride-Hive

- Designed and developed a carpooling mobile app to connect drivers and passengers for shared rides
- Implemented features such as ride creation, booking, real-time location tracking, and user authentication
- Integrated Google APIs for maps and location services to enhance navigation and route planning
- **Tools Used:** Flutter, Dart, Firebase, Google APIs
